**Cities and Sustainability**

Issues and Strategic Pathways

Series: Springer Proceedings in Business and Economics

- ▶ **Presents a combination of theoretical concepts and case studies, helping city planners to work towards the sustainability of their cities**
- ▶ **Covers all nodes of sustainability on a large canvas of cities and sustainability-relevant aspects**
- ▶ **Offers a comprehensive guide to handling the complex issue of making cities more sustainable**

The book addresses the sustainability of cities in the context of sustainability science and its application to the city boundary. In doing so it investigates all the components of a city on the basis of sustainability criteria. To achieve sustainability it is essential to adopt an integrated strategy that reflects all sectors within the city boundary and also address the four key normative concepts: the right to develop for all sections, social inclusion, convergence in living standards, and shared responsibility and opportunities among sectors and sections. In this book, the individual chapters examine the nodes of sustainability of a city and thus essentially present a large canvas wherein all sustainability-relevant issues are interwoven. This integrative approach is at the heart of the book and offers an extensive, innovative framework for future research on cities and sustainability alike. The book also includes selected case studies that add to the reading and comprehension value of the concepts presented, ensuring a blend of theory and practical case studies to help readers better comprehend the principle of sustainability and its application.
