About Workshop:

Artificial Intelligence (AI) is reshaping virtually every facet of human life, and libraries are no exception. Its far-reaching applications and implications are abundant, revolutionizing the management of collections, processes, and service delivery. One prominent aspect of AI, Generative AI, driven by large language models, has emerged with a multitude of opportunities and challenges. It wields a transformative influence on search and retrieval, publishing, and copyright, introducing disruptive changes to the established library paradigm while also offering solutions to complex challenges libraries encounter.

In light of this transformative landscape, we are pleased to announce this workshop on 'AI and Libraries: Implications and Applications.' The workshop aims to enlighten and empower library professionals by imparting knowledge on how to effectively harness AI in their daily tasks, fostering innovation within their field. The workshop, apart from providing a hands-on experience, will also share a list of AI tools which are useful in day to day work of librarians.

About IGIDR:

Indira Gandhi Institute of Development Research (IGIDR) is an advanced research institute and deemed university established by the Reserve Bank of India (RBI). It is located in the beautiful hillocks of Goregaon (E) near the Film City and has the architecture of the famous Ajanta and Ellora caves. It conducts MSc and PhD courses in development economics. Its state-of-the-art library caters to the information needs of students and faculty and also visitors from academic institutes.
